

flexAlert

what's new
in your
MLS software?

flexAlerts are email messages specifically about the flexmls® Web system. These messages describe new features and changes to existing features, including occasional removal of some features.

A flexAlert will typically have two parts:

1. Part One will be a brief summary of the system change.
2. Part Two will be a link if Part One needs more explanation or additional information.

Why read a flexAlert?

1. Learn about new features
2. Find out if features have been moved or removed
3. Update your saved searches to include new features
4. Be more productive and efficient
5. Offer better service to your clients

flexAlerts are ARMLS®'s primary means of communicating system updates and changes. Since they are short by design, they take very little time or effort. Don't miss out by not reading them!
